COMICCRAFT

Phase 1: Project Setup & Requirements

1. Phase Overview

The first phase of the ComicCraft project focuses on understanding the project requirements and setting up the basic development environment. This phase establishes the foundation required for developing the complete ComicCraft application.

2. Objective

The main objective of this phase is to:

- Understand the purpose and requirements of ComicCraft.
- Identify the major features of the application.
- Set up the required development tools and environment.
- Create the initial project structure.
- Identify the technologies, APIs, and dependencies required.
- Define the basic workflow of the application.

3. Project Requirements

ComicCraft is designed as an AI-powered comic creation application. The system should allow users to create comic content with the help of AI.

The major requirements include:

- User-friendly interface.
- Comic story or prompt input.
- AI-based story generation.
- Character creation and management.
- Comic panel generation.
- Image generation.

- Text and dialogue support.
- Comic preview.
- Download or export functionality.

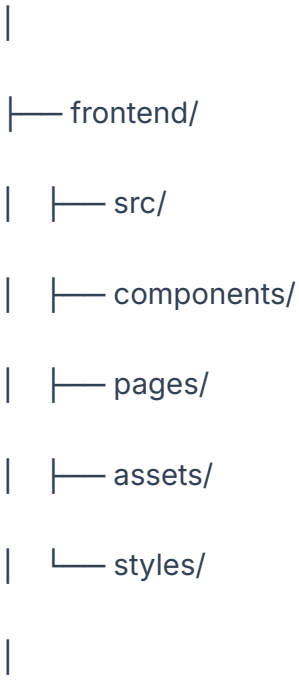

4. Development Environment Setup

The following tools are required for development:

- Visual Studio Code
- Node.js
- npm
- Git and GitHub
- Web browser
- Required AI/LLM APIs
- Required image-generation APIs
- Database or storage service

5. Initial Project Structure

The project will be organized into separate frontend and backend components.ComicCraft/

├── backend/

│ ├── routes/

│ ├── controllers/

│ ├── services/

│ ├── models/

│ └── config/

│

├── .env

├── package.json

├── README.md

└── .gitignore

6. Technology Identification

The technologies required for the project will be identified during this phase.

Frontend

- HTML
- CSS
- JavaScript
- React.js

Backend

- Node.js
- Express.js

AI Integration

- LLM/API for story and dialogue generation
- Image-generation API for comic visuals

Development Tools

- Visual Studio Code
- Git
- GitHub
- npm

7. Requirement Analysis

The functional requirements of ComicCraft include:

1. The user should be able to enter a comic idea or prompt.
2. The system should process the user's input.
3. AI should generate a suitable comic story.
4. The system should generate comic characters and scenes.
5. Comic panels should be created based on the generated story.
6. Dialogue and captions should be added to the panels.
7. The user should be able to preview the generated comic.
8. The completed comic should be available for export/download.

8. Non-Functional Requirements

- The application should have a simple and responsive interface.
- The system should provide reasonable response times.
- User input should be handled securely.
- API keys should not be exposed in the frontend.
- The application should be maintainable and scalable.
- Errors should be handled properly.

9. Phase 1 Deliverables

At the end of Phase 1, the following should be completed:

- Project requirements document.

- Development environment setup.
- Initial ComicCraft project structure.
- Technology stack identification.
- Functional and non-functional requirements.
- Initial development plan.

10. Expected Outcome

After completing Phase 1, the ComicCraft project will have a clear set of requirements, a properly configured development environment, and a well-defined project structure. This foundation will be used for the next phase of development.

Phase 1 Status

Parameter	Details
Phase Name	Project Setup & Requirements
Project Title	ComicCraft
Status	Completed / Ready for Phase 2
