COMICCRAFT

Phase 2: UI/UX Design & Frontend Development

1. Phase Overview

The second phase of the ComicCraft project focuses on designing the user interface and developing the frontend of the application. The main goal is to create a simple, attractive, responsive, and user-friendly interface through which users can interact with the ComicCraft system.

2. Objective

The main objectives of this phase are:

- Design the overall user interface of ComicCraft.
- Create a simple and attractive comic creation interface.
- Develop the frontend application.
- Create reusable UI components.
- Design pages for comic creation and preview.
- Make the application responsive for different screen sizes.

3. UI/UX Design

The ComicCraft interface should provide an easy workflow for creating comics.

The basic user flow will be:

Home Page → Create Comic → Enter Story / Prompt → Generate Comic → Comic Preview → Edit / Regenerate → Export Comic

4. Main Frontend Pages

The following pages will be designed and developed:

Home Page

The home page introduces ComicCraft and provides access to the comic creation functionality.
Main elements:

- ComicCraft logo/title
- Introduction
- Create Comic button
- Features section
- Navigation menu

Comic Creation Page

This page allows the user to provide the information required to create a comic.
Main elements:

- Story/prompt input
- Character information
- Comic style selection
- Number of panels
- Generate button

Comic Preview Page

This page displays the generated comic.
Main elements:

- Comic panels
- Character images
- Dialogue/captions
- Regenerate option
- Edit option
- Download/export option

5. Frontend Components

Reusable components will be created to make development easier:

- Navbar
- HeroSection
- ComicPrompt
- CharacterInput
- StyleSelector
- GenerateButton
- ComicPanel

- ComicPreview
- Footer

6. Frontend Development

The frontend will be developed using modern web technologies:

- React.js
- JavaScript
- HTML
- CSS
- Responsive design

React components will be used to divide the application into smaller and reusable sections.

7. Responsive Design

The ComicCraft interface should work properly on:

- Desktop
- Laptop
- Tablet
- Mobile devices

The layout, buttons, input fields, comic panels, and images should automatically adjust according to the screen size.

8. User Interaction

The frontend should provide clear interaction between the user and the application:

User enters prompt → User selects comic style → User clicks Generate → Loading screen appears → Generated comic is displayed

9. Error Handling

The frontend should display appropriate messages when:

- The prompt is empty.
- Required information is missing.
- Comic generation fails.
- API request fails.

- Generated content cannot be loaded.

Example: "Please enter a comic story or prompt."

10. Phase 2 Deliverables

At the end of Phase 2, the following should be completed:

- ComicCraft UI/UX design.
- Home page.
- Comic creation page.
- Comic preview page.
- Navigation components.
- Input and selection components.
- Responsive frontend layout.
- Basic frontend validation.

11. Expected Outcome

After completing Phase 2, ComicCraft will have a functional and responsive frontend interface. Users will be able to navigate through the application, enter comic requirements, and access the comic generation workflow.

Attribute	Details
Project Title	ComicCraft
Phase Name	UI/UX Design & Frontend Development
Status	Completed / Ready for Phase 3
